## Product Feature And Application

The history of the SS Steering Wheel 5 Spoke Foam Grip Control Knob dates back to the development of marine steering systems. The steering wheel is an important part of any boat, allowing the captain to control the direction of the boat. The use of stainless steel (SS) in steering wheel construction has become popular due to its durability and corrosion resistance, which are critical in marine environments. Stainless steel is known for its strength and ability to withstand salt water, making it an ideal material for marine applications. The steering wheel's 5-spoke design provides balanced support and distribution of steering forces. This design helps ensure smooth, precise steering control, even in rough waters. The spokes are strategically placed to provide enough grip and stability to allow the captain to maneuver the boat with ease. The foam grips on the SS Steering Wheel 5 Spoke Foam Grip Control Knob are another great feature. The foam material provides captains with a comfortable and non-slip surface that reduces fatigue during long drives. The foam handle is also waterproof, making it ideal for use in marine environments where you are often exposed to moisture. The control knobs are usually located in the center of the steering wheel, making them easier to operate. It provides extra control and leverage when making tight turns or crossing narrow waterways. Control knobs are typically made from the same stainless steel material as the rest of the wheel, ensuring durability and reliability. Overall, the SS Steering Wheel 5 Spoke Foam Grip Control Knob is a product that combines functionality, comfort, and durability. It has evolved over time to meet the needs of boat owners and captains, providing reliable, efficient steering solutions for their vessels.

## Product Details

SS Steering Wheel 5 Spoke Foam Grip Control Knob may have the following features:

**Stainless Steel Construction:** The steering wheel is constructed from durable stainless steel, which resists corrosion and enhances its durability in

marine environments.

**FIVE-SPOKE DESIGN:** The steering wheel features a five-spoke design that provides stability and strength.

**Foam Grip:** The wheel has a foam grip around the circumference to provide a comfortable, secure grip. Foam material helps absorb vibration and reduce fatigue during extended use.

**Control Knobs:** Control knobs on the wheel hub give the operator greater control and maneuverability, especially when making tight turns or stops.

**UNIVERSAL FIT:** The steering wheel features a universal design that fits most standard ship steering systems.

**Easy to install:** The steering wheel should have a simple installation process, which usually requires basic hand tools.

**STYLISH LOOK:** Stainless steel construction and five-spoke design give the steering wheel a sleek, modern look that enhances the overall aesthetic of the boat.

### **Loading & Shipment**

Thanks to superior quality, we have been establishing a close & long business partner relationship with the customers from more than 30 countries, and we've gotten so many positive feedback regarding the quality.
